

Systems: Human Systems

- On the back of the handout provided, list every system that uses, needs, or carries water.
- On the back of the handout provided, list every system that uses, needs, or carries oxygen.
- On the front of the handout provided, label each system with the characteristic of life that it is associated with (you may have multiple characteristics for each system).
- Choose the system that you think is most interesting (not most important – they are all equally important) and write a paragraph about how life would be impossible if that system did not exist.

Skeletal System

Muscular System

Circulatory System

Digestive System

Urinary System

Nervous System

Reproductive System

Lymphatic System

Endocrine System

Respiratory System
